

Abstract

uses Transportation of amarah city

This study Aims at analyzing the impact of urban transport in functional construction and physical expansion of the city Amarah. This takes place through studying the characteristics of natural geography and its significant role in constructing and uses transport in addition to knowing the reality of traffic movement and specifying the reasons of its aggregation in order to know the direction of the city in the future according to steering network.

The study as a whole consists of Fi chapters plus conclusion and recommendations.

Chapter one includes deals with the geographical characteristics and physical expansion of the Amarah city the cultural evolution of the city of Amarah this chapter also deals with the characteristics of human and role constructing and garages and the streets network,

Chapter two deals with uses transport consists streets types corroding to functional construction also garages .

The morphological stages of the city have also been deals with as well as The development urban Transport through its four stages since beginning in 1861 unit 2008) the introduction and the Theoretical frame work an adequate analysis of the problem and its assumption has dealt with

the chapter three also includes the research and the boundaries of the area of study, method research and previous studies The types of the streets and areas allocated for purposes of Transport and facilities related to Transport and its functional efficacy ..

Four Chapter has been devoted to the special analysis of the reality of the movement Of Transport and traffic in the city though Which it has become possible to know The nature of the traffic movement has also been discussed alongside specifying the problems facing the streets of the city such as jams. It has been found that The junction are The most crowded places. The use of urban lands and its role in attracting journeys has also been studied. It has been found that The commercial uses are The most attracting ones.

Chapter seven deals with the future aspirations for the role of urban transport in physical expansion of the city until 2017 predicting the growth of population and predicting the number of vehicles and the

Reality of traffic movement depending on the population growth rate and some of geographical criteria and indications through diagrams in addition to uncovering the impact of the transport in planning geography cultural structure and the directions of the city growth and its future expansion through using the (collaring).

It has been concluded that urban transport plays a significant role in designing the cultural structure of the city and determining the direction of its future expansion.

Finally the study came with spelling out a group of conclusions and recommendations which have come in consistence with the objective of the research and its assumptions added to it a bibliographical list of references and appendices used in the study.
