

Abstract

The problem for the study lies in the fact that some intelligences don't pay attention on using special exercises for develop chart intelligence level . he depend on traditional practices' , the matter which makes exercises depend only on traditional forms .these factors drives the scholars to put , special exercises for developing chart intelligence for fencing weapon .

The aim of the research to:

1. A scale tactical intelligence of the player's epee fencing weapon.
2. A normative levels to the level of tactical intelligence of the players weapon fencing foil.
3. Put some special exercises to develop the level of action and tactical intelligence of the players with a weapon fencing foil.
4. Identify the impact of exercise on the development level of action and tactical intelligence of the players with a weapon fencing foil.

The researcher used a descriptive approach screening method for the construction and codification of the scale, while the experimental method to investigate the effect of exercise on the development level of action and tactical intelligence of the players weapon fencing Blinds, samples and research on a sample based scale consisting of (80) players from clubs to players of Iraq's epee fencing weapon , and a sample test for the application of exercise consisting of (18) players from clubs to players Maysan to duel weapon Blinds .

To achieve the goal of the first search, the researchers reviewed previous studies and relevant scales and conduct some interviews with experts and specialists gentlemen, as well as the questionnaire presented to the gentlemen of experts and specialists, has been formulated (83) position, in light of their comments were rejected (36) stand for the lack of access to approval of the majority of experts and specialists, bringing the measure consists of (47) stand for statistical Dalalthma, after the meter has been applied to a sample number of players (6) players to ensure the clarity of instructions and paragraphs of the scale, bringing the measure ready for application.

To determine the scale passages researcher used method of extremist groups in the light of the results has been accepted (44) position has been rejected (3) positions, and is validated on a scale by extracting several indications of true the fullness as required by building scale, including: apparent honesty, sincerity and construction, and honesty Territories, and

ratified the test procedure using the law of Pearson correlation to identify the correlation between degrees of each position and the total degree of association, has resulted in the rejection of (9) positions of the lack of statistical significance and thus became the standard in its final form consists of (35) stand for statistical their evidence, as verified measure of stability and objectivity through the use of method of test, as was the correlation coefficient (0.86), a high-index for the construction of the test, as well as the scale of the development of standards through the use of class.

Standard amended, and finally achieve the goal of the second search has been developed (6) levels of standard gauge One of the main conclusions reached by the researcher:

1. Been reached on the scale of the level of intelligence for tactical players epee fencing weapon.
2. Been developed grades and levels of standard for the performance of the research sample to test the tactical intelligence.
3. To exercise prepared by the researcher for a positive impact in the development of the level of action and tactical intelligence of the players weapon fencing foil.

The researcher recommended a number of recommendations based on the search results that have been achieved, including:

1. Adoption of the current scale by fencing weapon fencing coaches, to see grades and levels of intelligence to tactical players, so Best an them levels and degrees standard developed by the researcher .
2. Trained to confirm the importance of measuring the level of intelligence at the tactical choice of national team players.
3. Confirm the importance of using trained special exercise by a researcher at the training modules, which have a positive impact in the development of the level of action and tactical intelligence of the player's weapon fencing foil.
